Applicant's response of 08 June 2009 has been studied carefully.

Applicant has filed a copy of a 31 page opposition by BEHR in the EPO to the patent grant of a foreign equivalent of the current application (owned by VALEO). Applicant has made the BEHR opposition of record without providing a translation. Applicant is required to provide a translation of the 31 page BEHR opposition. If applicant refuses, US counsel is required to paraphrase in English the contents of this 31 page BEHR opposition in a manner that will permit the current examiner to meaningfully understand its contents.

With the rewriting of claims 5-29 in proper form for US examination, this application now contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

First species of Figures 1-7 as shown,

Second species of Figure 8,

Third species of Figures 1-7 with the distributor of Figures 9-10 instead of the distributor of Figure 3,

Fourth species of Figures 11-12,

Fifth species of Figure 13,
Sixth species of Figures 14-15,
Seventh species of Figures 16-17 and
Eighth species of Figures 18-19

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) appears to be generic: claim 1.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: it appears that claim 1 is not allowable for the reasons stated in the 31 page opposition filed in the EPO on February 18, 2008, incorporated here by reference. Therefore the patentability, if any, will necessarily lie in the dependent species claims.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of each of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
